Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

V-1 Closest prior art is any of the documents discussed in the first 7 pages of the application. The documents describe methods for evaluating properties of material on the outer side of a cemented casing, the methods being based respectively on extensional, thickness and flexural modes of vibration of the casing. The objective of the present application is to improve the reliability of said evaluations.

This problem is solved by using more than one method simultaneously to yield more than one measurement, combining the measurement and basing the evaluation on a combination of said measurements (corresponding features also in the apparatus claim 14).

The claimed methods (and apparatuses) do not consists merely of a juxtaposition of known features, as they foresee one single evaluation based on a combination of measurements and not a plurality of evaluations each based on the respective measurements. Independent claims 1 and 14, together with related dependant claims, meet therefore the requirements of Art. 33(3) PCT.
